The application has been amended as follows:

7. (Currently Amended) An Internet Protocol version 6 (IPv6)-based data network that is operable to generate a first stateful IP autoconfiguration message at a mobile node, wherein said message contains an address capable of use for route maintenance to and from said mobile node, the network comprising hosts including one or more of ~~an a~~ a first access node, a dynamic host configuration protocol (DHCP) Relay, and a DHCP Server, the network comprising:

a means for receiving a the first stateful IPv6 autoconfiguration message from said mobile node, wherein said message comprises a mobile node IP address capable of use for route maintenance to deliver data to, and receive data from, said mobile node , wherein said means for receiving further receives, from a second access node, a second stateful IPv6 autoconfiguration message that confirms the IP address acquired by said mobile node prior to accessing said second access node, wherein said second access node adds its address to said second message and wherein said DHCP Server

receives and analyses the second stateful IPv6 autoconfiguration message to determine whether said IP address therein is consistent with a set of addresses maintained by the DHCP Server in association with the mobile node; and

a means for analyzing said first stateful IPv6 autoconfiguration message to determine a route to one or more of deliver data to, and receive data from, said mobile node; and

a means for triggering transmission of one or more route update message from said first access node and said DHCP Server to a number of network elements between said first access node and a said DHCP server in the IPv6-based data network, wherein said one or more route update messages from said first access node and said DHCP server are triggered substantially simultaneously and wherein said means for triggering, in response to said determination of whether said IP address in the second stateful IPv6 autoconfiguration message is consistent with a set of addresses maintained by the DHCP Server in association with the mobile node, triggers one or more route update messages to one or more of said first access node and said second access node to delete obsolete address information used for route maintenance to and from said mobile node.

8-10. (Canceled)

19. (Currently Amended) A non-transitory storage medium storing processor-implementable instructions to carry out the method according to Claim 1.
